## MODULAR SKATEPARKS

Devoted solely to the development of modular skateboard ramps and other components for skateparks.

Over 60 skateparks in 35 council areas throughout Australia have been established.

Modules are made in varying shapes and sizes to accommodate different skill levels of skateboarders, from novice to expert.

In addition, one of the most important features of these modules is that the skateparks can be varied and changed, modules can be added, deleted or moved and as skateboarders develop new moves, modules can be designed and added accordingly.

**THE TRANSITION NOSING**  
One of the most critical areas on a skateboard ramp is the transition zone from flat to ramp. If this is uneven or prone to wear, it creates the potential for serious falls and injury. Wherever possible, SkateRamp Company modular ramps incorporate a machine formed metal transition nose as part of the concrete casting, thus minimising the need for a polymer fill to smooth the transition.

**Features and Benefits**  
There are numerous advantages to be gained by using modular ramps from the SkateRamp Company instead of in situ castings -

- Expandable
- Cost savings
- Movable/removable
- Ease and speed of installation
- Controllable formats for competitions
- Virtually seamless transition between units
- Consistent profiles, surface finish and overall quality
- Low environmental impact; coloured concrete available to order
