Thematic, Educational & Interactive

Games are configurable to change the way they are played. Control is via bluetooth technology.

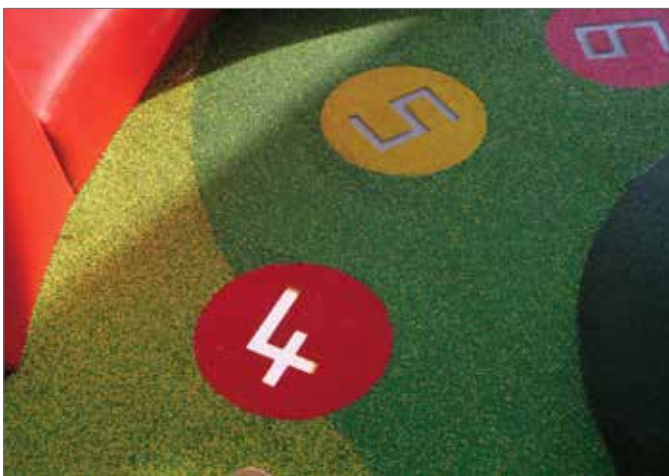

SOUND AND MUSICAL GARDEN - SCHOOL

Images (vehicles, animals, letters...) are implemented into the playscape. The child stands on the image then hears the corresponding sound and reads what the image is on the display screen. Conversely, they hear a sound and have to go and stand on the corresponding image.

INTERACTIVE PATHWAY - CHILDCARE CENTRE

The bright mushrooms produce light and sound when walked over sparking the child's imagination. Other shapes and colours are available.

BRIGHT HOPSCOTCH - SHOPPING CENTRE

Hopscotch has long been a game played in schoolyards. Interactive hopscotch with musical features and luminous pads will enchant the children. This activity also allows the younger children to learn numbers.

INTERACTIVE TWISTER - PUBLIC SPACE

Conventional twister is brought to the public space. Players need to follow the instructions provided via the solar totem. Last one 'standing' wins!

Memory, Independence & Social Integration

Games are configurable to change the way they are played. Control is via bluetooth technology.

INGROUND PIANO KEYS - PUBLIC SPACE

Polyphonic music games - interactive musical instrument. Other forms are possible: piano, congas, drums, orchestra, musical animal (caterpillar, snail)...

The options are only limited by your imagination!

SPORTS ACTIVITIES - PUBLIC SPACE

Test your skills with your friends. Practice your soccer skills. Test your long jump. See who is the fastest runner. Test your reaction times.

The results are displayed on the LED screen.

BLUETOOTH CONTROLLED

All equipment can incorporate a Bluetooth receiver. Free access or by code, users can configure to their requirements. Ideal for creating youth spaces.

SENSORY PATH - HEALTH CARE CENTRE

Sensory pathway - at each step a different feel and corresponding sound environment. Used alone or with accompanying staff this module is also a therapeutic tool.
